The present sequence encodes mouse activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallargic, antianaemic, antiasthmatic, ophthalmological, anti-HTV and dermatological activities, and can be used in gene therapy. AID dermatological activities, and can be used in gene therapy. AID treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic collitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for gene therapy and the antibodies to the AID protein may be used for gene therapy and these disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 332

```
The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antiantemic, antiantemic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleocitides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, dup allergy, allergic rhinitis, Rosen disease, Dideocrge disease, ataxia telangiectasia, common variable immunodeficiency disorder, MHC (major histocompatibility class), class
                                                                                                                                                                                                                                                                            Activation-induced cytidine deaminase; AID; cytidine deaminase; immune related disease; allergy; allergic disease; antiallergic; antianemmic; antiasthmatic; ophthalmological; anti-HIV; dermatological; gene therapy; B cell associated immune system disorder; food allergy; immunodeficiency disease; immunoglobulin A deficiency disease; asthma; IgA nephritis; gamma-globulinaemia; atopic dermatitis; allergic colitis; darug allergy; allergic rhinitis; Rosen disease; DiGeorge disease; AIDS; ataxia telangiectasia; common variable immunodeficiency disorder; major histocompatibility class II deficiency disease; auto immunodeficiency syndrome; IgG subclass selection disorder; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used for gene therapy and the antibodies to the AID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 may be used for diagnosis and treatment of these disorders. The sequence represents a genomic DNA sequence of human AID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      II deficiency disease, AIDS (auto immunodeficiency syndrome), elevated 1gE disorder, and 1gG subclass selection disorder. The DNA sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an activation-induced cytidine deaminase has characterized (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has oxtidine activity similar to APOBEC-1. AID has antiallergic, antianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immunes system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen (Issease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated in Gisease, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents a genomic DNA sequence of human AID.

The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of those disorders. The present sequence represents the exon 3 genomic DNA sequence of human AID.

This is the polynucleotide sequence of the clone 1p547_4, which was isolated from a human fetal brain cDNA library using methods which are selective for cDNAs encoding secreted proteins, or by identification as a secreted or transmembrane protein on the basis of computer analysis of the amino acid sequence of the encoded protein.

The PNS and proteins of the invention are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immulating (e.g. as vaccines) or suppressing activity, hemostatic activity, chemotestial cactivity, chemotesticic/chemokinetic activity, and thrombolytic activity, chemotestic/chemokinetic activity, and thunor inhibition activity. The PNS are also stated to be useful for gene therapy. Other activity: The PNS are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or inhibition activity. The PNS are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or inhibition activity. And also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection of bodily characteristics such as, eg. weight, color, skin, etc., effecting biorhythms or circadian cycles; enhancing fertility; treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             758

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other cytokines in certain cell poulations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of warious immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in

graft-versus-host diseases (GVHD), in the induction of tumour immunity, in the treatment of burns, incisions and ulcers; as well as in treatment of burns, incisions and ulcers; as well as in treatment of periodontal disease, osteoporosis or osteoarthritis, mediated by inflammatory processes, diseases of the peripheral nervous system, alzahimaris, Parthinson's disease, Huntington's disease, anylotrophic lateral sclerosis, and SNy-Drager syndrome, infections, infarction of cardiac and central nervous system vessel e.g. stroke, sepsis, inflammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence encodes a secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1052

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polynucleotides (ABA90876-ABA90968 and ABA90980) and encoded proteins (ABB55698-ABB55800), especially polynucleotides SEQ ID NO 1 (ABA90876) and SEQ ID NO 19 (ABA90885) and proteins SEQ ID NO 2 (ABB55698) and SEQ ID NO 20 (ABB55707) contained in clones bd306-7 and yB8-1 respectively and the clones bd306-7 and yB8-1 are deposited with the American Type Culture Collection (ATCC) with are deposited with the American Type Culture Collection (ATCC) with accession number 98599. The polynucleotides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary, neuroprotective, activin, inhibin, chemotactic, haemostatic, thrombolytic and anti-inflammatory activity and acting as cytokine modulators,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a human RNA-associated protein. The expression of RNA-associated proteins is closely associated with reproductive tissues, nervous tissues, cell proliferation including cancer, inflammation and immune responses, and so they may be used for diagnosis, treatment or prevention of cell proliferative, immune/inflammatory disorders, and reproductive disorders. Diseases and disorders which may be treated include actinic keratosis, atherosclerosis, arteriosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysomal nocturnal

                                               The human RNA editing enzyme (RDE) is used in a pharmaceutical carrier discases and circulatory system disorders. The enzyme is used in vivo for the correct processing of RNA transcripts of genes e.g. change of a codon in apolipoprotein B (apoB) RNA to give a 100 and 48 kDa product transcribed from the same gene. Certain disorders have been linked to incorrect RNA editing, e.g. failure of apo B editing leads to excessive apoB 100 production and hypercholesterolaemia. Other disorders thought to be linked to incorrect RNA processing include aberrant alpha-galactosidase processing in Fabry's disease and neurofibromatosis type I. The enzyme can be produced recombinantly to treat related disorders. It can also be used to raise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     342

REE-2 has chemical and structural homology with the human apoB RNA editing protein HEPR (28% identity), the rat HEPR homologue REPR (30% identity), and a portion of the mRNA editing enzyme phorbolin I (43% identity). REE-2 was found to be expressed in a variety of cDNA libraries, a high proportion of which were derived from tumnours, neuronal tissues, immune system cells or synovial tissue from arthritis patients. REE-2 is therefore thought to be associated with the development of cancer, autoimmune disorders, circulatory system disorders (e.g. hypercholestezolaemia), viral infections and neurological diseases (e.g. neurofibromatosis). REE-2 or its nucleic acids may be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnosis, treatment and prevention of such diseases via the modulation of transcript editing, which in turn has effects on the encoded protein (e.g., an alteration in protein activity). The invention specifically relates to methods of detecting nucleic acids encoding human REE-2 in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of novel human enzyme polypeptides (AMU22915-AAU23814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of immunodeficiency disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. phenylketonuria), inflammatory disorders (e.g. phenylketonuria), inflammatory disorders blood-related disorders (e.g. atherosclerosis),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 4; SEQ ID No 646; 1180pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                         proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, valnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous Novel polypeptides and polynucleotides useful for diagnosing, diseases

Claim 4; SEQ ID No 633; 1180pp; English.

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. abhma), cardiovascular disorders (e.g. athman, cardiovascular disorders (e.g. athmanoticies of infertility) and infectious disorders (e.g. the novel human only meaning the properties of the invention can also be used in gene therapy. Assume polypeptides of the invention can also be used in gene therapy on the invention can also be used in gene therapy. Assume polypeptides of the invention.

Conzyme polypeptides of the invention.

Conzyme polypeptides of the invention.

Conzyme polypeptides of the invention can also be used in gene therapy.

Consyme polypeptides of the invention.

Conzyme polypeptides of the invention.

Conzyme polypeptides of the invention.

Conzyme polypeptides of the invention can also be used in gene therapy.

Construction of the propertion of the printed in electronic format directly from Wipo at the invention can also be used in gener

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous localised neuropathses and central nervous system, such as peripheral nervous injuries, peripheral neuropathy and Alzehimer's, Parkinson's disease, Huntington's diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and therapy, drug screening, c.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               917 TTCACCGTGGAAGGTATAAAGCGCCGCTCAGTTGTCTCCTGGAAGACG-----GGCGTC 864

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
